

safe spot

Navigate cities safely with
AI-powered intelligence.

HACK
YEAH

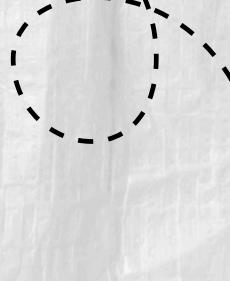

2025

Our Idea

A mobile safety companion that transforms complex incident data into clear, actionable insights through AI-powered updates and intuitive color-coded zones.

Because everyone deserves to discover the world with confidence, not fear.

Main Features

Danger Zones

Stay safe and aware.

Discover areas and situations to avoid, high-risk locations, and important safety precautions for travelers in this country.

AI Support

Your personal travel assistant.

Get instant answers to your questions, real-time help, and customized advice for any situation you encounter.

To be added...

Map Points

Real-time incident alerts.

View recent accidents, crimes, fires, and safety incidents in the area to stay informed and avoid potential danger zones.

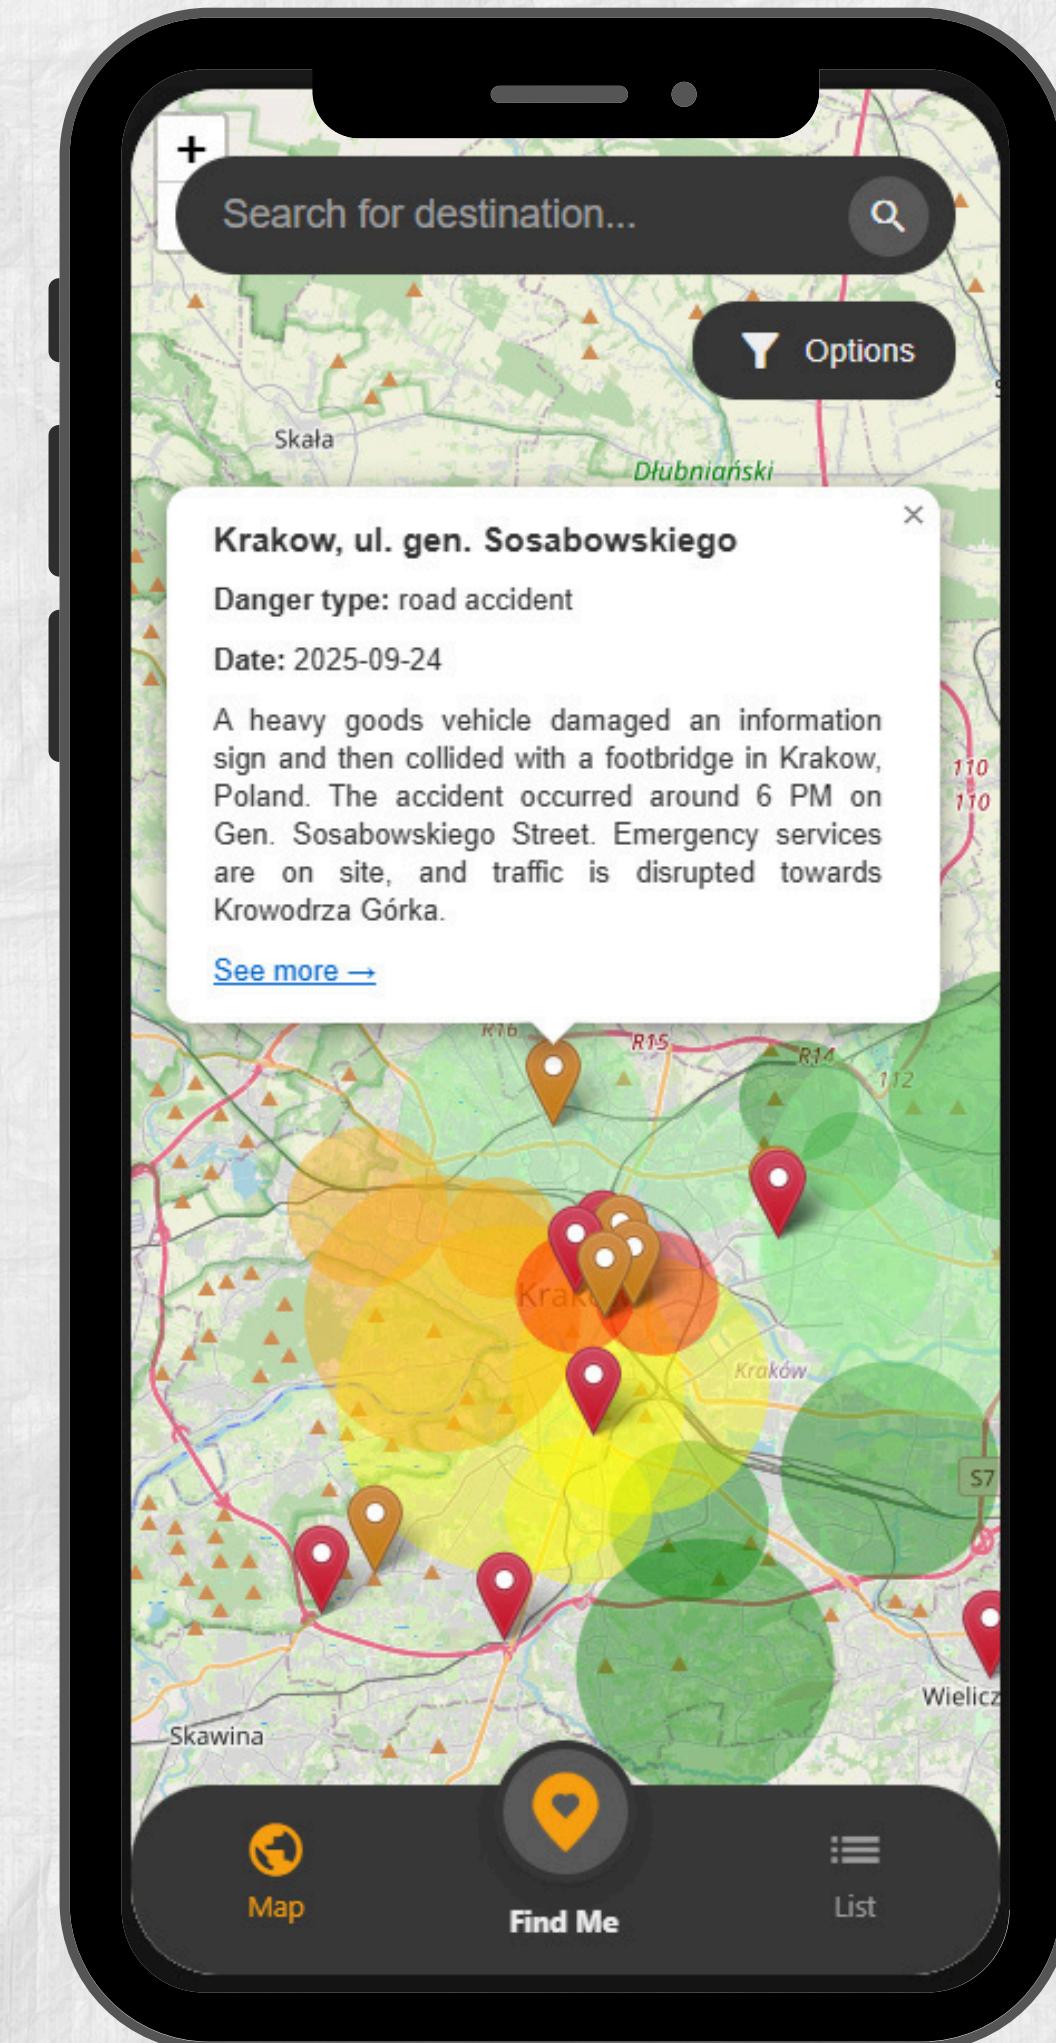

Culture Tips

Navigate local customs with confidence.

Learn critical etiquette rules, common mistakes to avoid, and cultural insights to help you blend in respectfully.

In beta tests

Feel safe in your
Favourite Destinations

Krakow

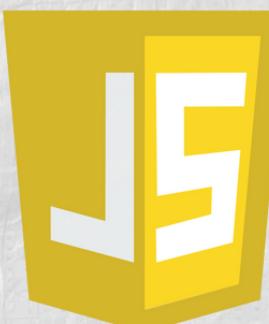

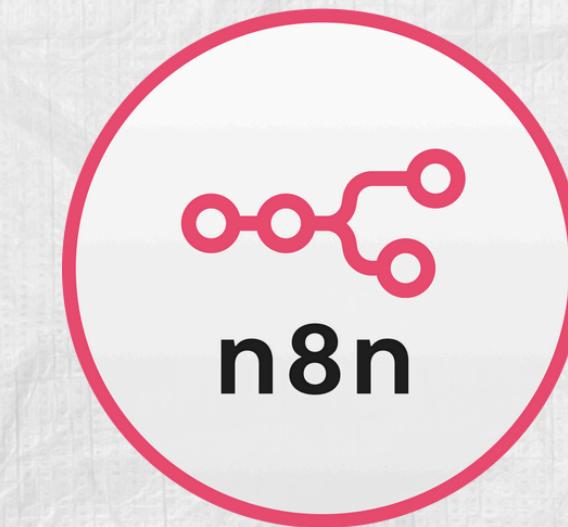

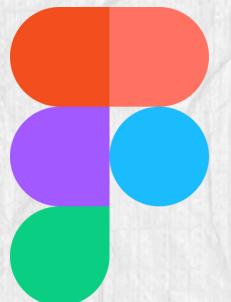

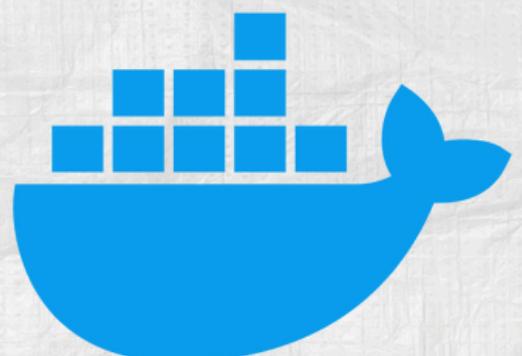

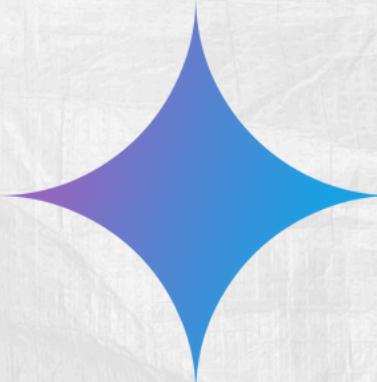

London

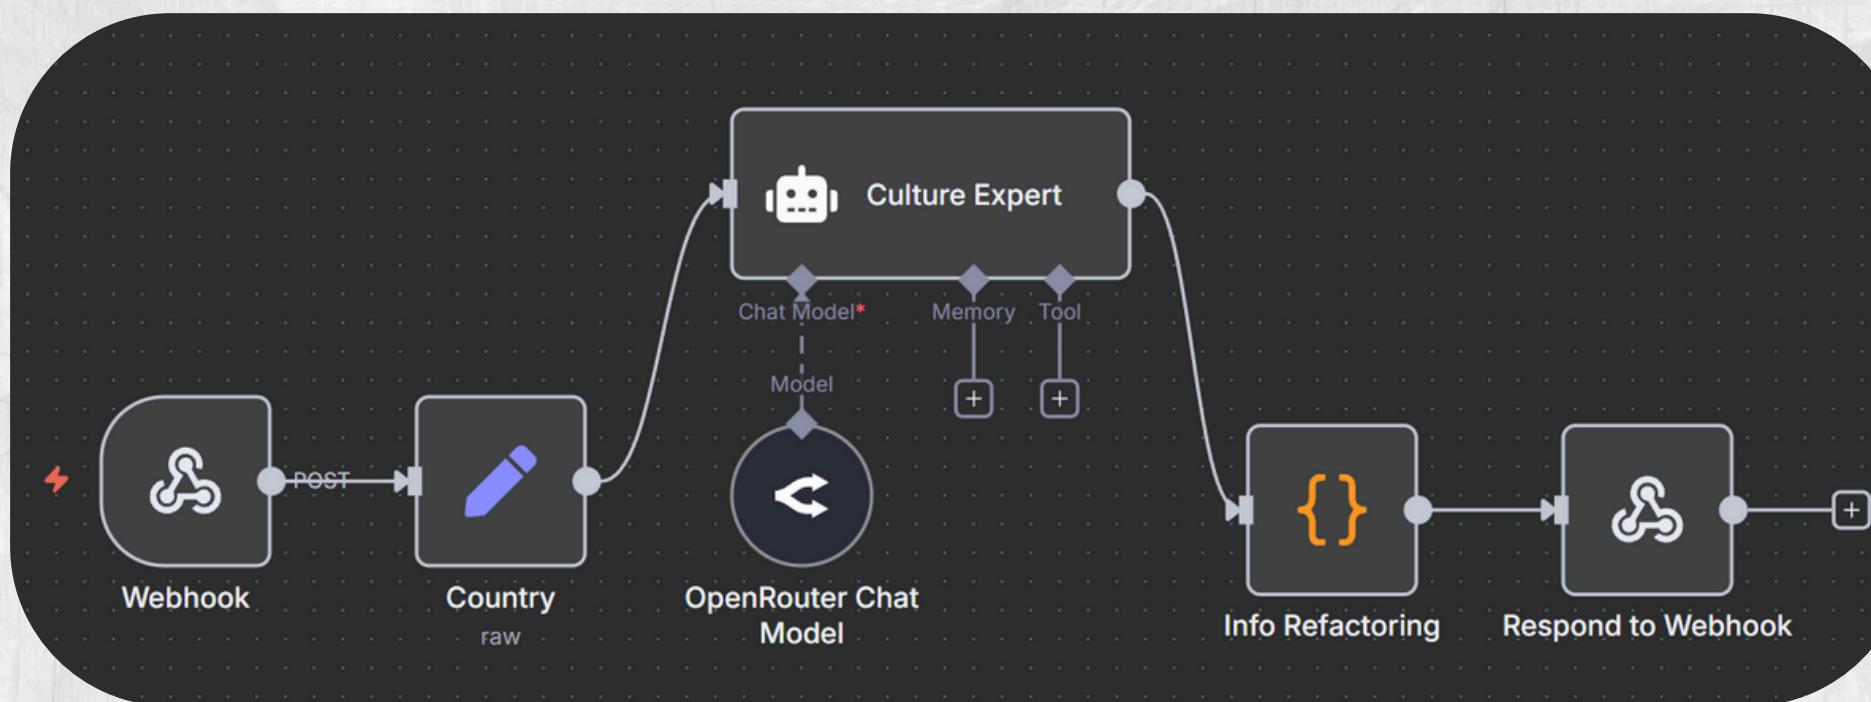

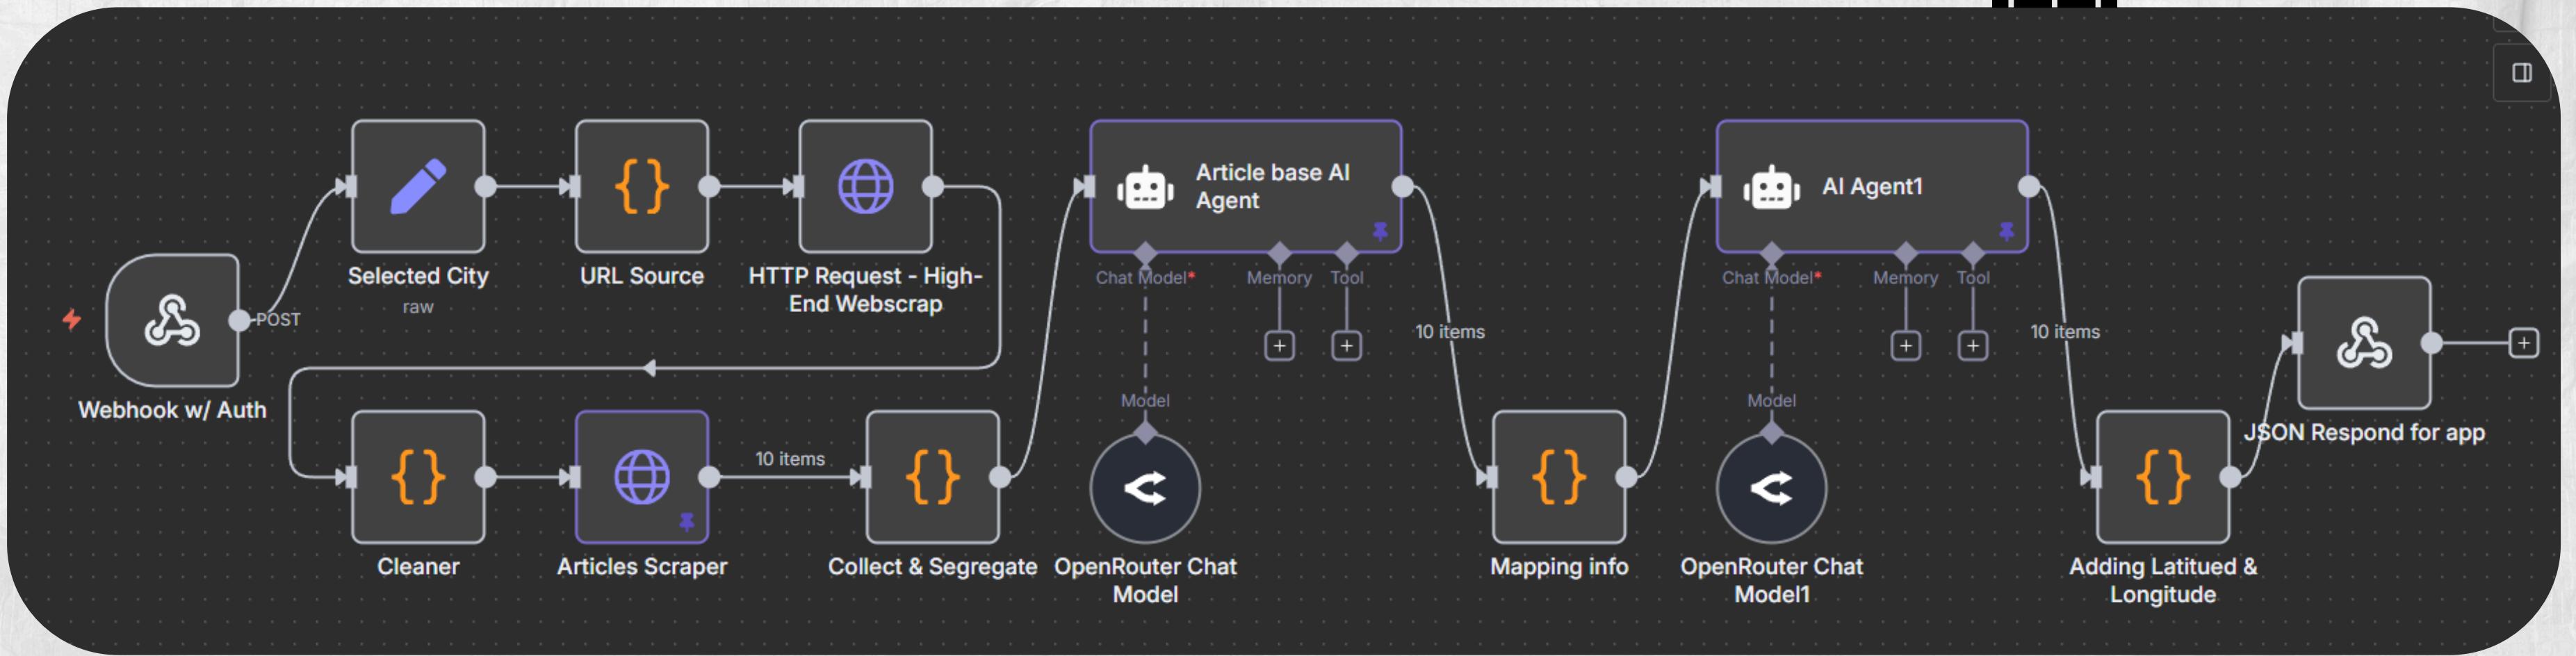

Warsaw

... and many more in the future.

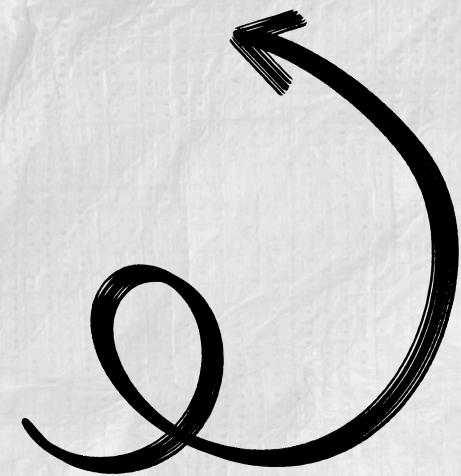

Technologies We Used

The army of Agents

The **core of**
our Project

Next Destinations

Support for more of the **popular tourist destinations** (capital cities, entire regions)

AI Chatbot and Speech-To-Speech AI Assistant for real-time conversation translation between two people - perfect for emergencies and stressful situations!

Safe Journey Planner to create the most efficient and secure routes between chosen points (attractions, restaurants etc.) - The First Mode of a Journey Planner. **Introvert Mode** - a journey planner that creates routes based on typical crowd levels at selected locations- The Second Mode of a Journey Planner

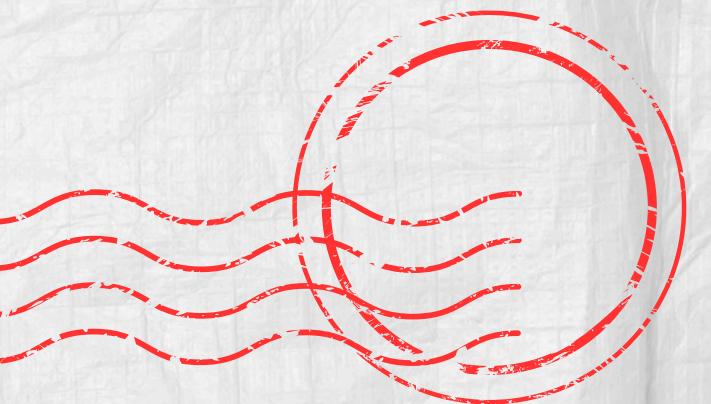

Interactive Discussion Forum for all users enabling communication between users for sharing their routes, journey plans and points of interest!

Enhanced **UX/UI** including login and registration pages, user profile, and route/destination history

Integration of more reliable, potentially paid **data sources** and adding Data Base instead of single files

Migration to **cloud infrastructure** for better scalability and reliability

Thank you and Safe travels!
